From: Gordon Dunsire, CILIP Representative

Subject: Illustrative content and other augmentations: Discussion Paper

CILIP thanks EURIG for its discussion paper.

CILIP does not agree with the approach taken by the paper. CILIP believes that RDA correctly deals with illustrative content at the expression level, irrespective of whether the expression is part of an aggregate or not. CILIP agrees that data about augmentations which are not given separate descriptions can be recorded at manifestation level, but a separate description here refers to a complete FRBR description, where any "content" is assigned to the expression entity, rather than a record for a manifestation.
