

## COMPLETE EXAMPLES – AUTHORITY RECORDS

---

These examples represent a particular agency's policies on the application of RDA instructions and are illustrative not prescriptive. These examples sometimes reflect the application of optional additions to the instructions. They do not show the application of alternatives to the instructions. Some of the identifiers have been devised. Access points, which are not RDA elements, have been included in some examples because they are part of the RDA instructions. MARC examples use MARC input conventions but non-sorting characters are not indicated. MARC examples show some data that has no RDA equivalent.

**Shaded rows indicate core elements. For core elements with multiple instances, only the first instance of the element has been shaded. Elements that are core in certain circumstances, such as medium of performance for a musical work with a title that is not distinctive, are also shaded.**

**+ Indicates elements which must be incorporated into the authorized access point. Elements that must be incorporated into the authorized access point because of conflict or special instructions have explanatory footnotes.**

**++ Indicates elements which could be incorporated into the authorized access point either because of conflict or the application of optional additions.**
